SUMMARY

Backend Developer with 3.5 years of production experience building RESTful APIs MVC Architecture and microservices using Node.js, NestJS, Express.js, and MongoDB. Proven track record with JWT and RBAC-based authentication, Redis caching, PostgreSQL, and GraphQL. Integrated OpenAI and Google Gemini APIs into live client applications. Strong understanding of secure API design, MVC architecture, and cross-functional team collaboration. Extensive experience in HTML/HTML5, XML, CSS/CSS3, JavaScript, TypeScript, Nodejs, JSON. Open for new technologies, challenges and quickly able to adapt new environments.

SKILLS

Backend: Node.js, NestJS, Express.js, REST APIs, GraphQL, Microservices, MVC, Middleware

Frontend: React.js, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, Bootstrap, Redux, Context API

Databases: MongoDB, PostgreSQL, Mongoose, Redis Caching

Auth & Security: JWT, OAuth, RBAC, Helmet, XSS Prevention, Clickjacking Protection

AI / LLM: OpenAI API, Google Gemini API, LLM Integration

Tools: Git, GitHub, Postman, NPM, VS Code, ES6, DBeaver, Mongoose, MongoDB Atlas

EXPERIENCE

Backend Developer
May 2023 – Present
Lance Soft Engineering
Hyderabad, India

I have been working as a Backend Developer at a startup with a team of 8 members. My role involved:• Backend Development: Working with NodeJS in a MVC architecture to build scalable and maintainable APIs. Implemented JWT-based authentication and role-based access control (RBAC) to secure APIs. Optimized MongoDB queries and indexing, improving performance by 30%. • Our primary project was developing the Mqsala laundry application, which involved end-to-end development and collaboration across various functions projects.

Software Developer I
July 2022 – April 2023
Tech Weaver Systems Pvt. Ltd.
Hyderabad, India

At Teach Weaver Systems Pvt. Ldt, I worked as a entry level Full Stack Developer where I was actively involved in designing and developing web applications from scratch under my superiors. My work spanned across frontend and backend, where I built responsive interfaces using React.js, Redux, and Tailwind CSS, while also developing secure and scalable APIs with Node.js, Express.js, and MongoDB. I collaborated closely with cross-functional teams to integrate third-party services such as UPI payment gateways like Rozer pay or Stripe, ensuring seamless user experiences. Additionally, daily stand-ups, and code reviews. My key contributions included developing a Customer Management Portal to streamline client operations and enhancing an E-commerce platform with order management and secure payment features.

PROJECTS

MQSALA – Laundry Service Platform
November 2023 – December 2024

Overview:

MQSALA is a comprehensive multi-platform laundry service application designed for scalable, multi-country deployment with internationalization support. The project encompasses three distinct applications tailored for partners, delivery captains, and customers.

- Designed and built backend services in Node.js using MVC architecture, maintaining clean separation of code.

- Optimized MongoDB schemas for users, orders, services, and partner data, supporting complex queries and horizontal scalability.
- Developed secure RESTful APIs for booking management, real-time order tracking, and dynamic service configuration.
- Built a geolocation-based partner matching engine to connect customers with nearby service providers based on proximity and availability.
- Implemented JWT authentication with RBAC across three distinct user roles: customer, partner, and admin.
- Delivered full i18n multi-language support using internationalisation libraries, enabling deployment across multiple countries and languages.

Chromecast Management System (Backend) Aug 2024 – Jan 2025

Overview:

Developed a Chromecast Management System backend to enable seamless communication between the web dashboard, guest panel, and Chromecast devices. The system allows host users to generate secure QR codes for Chromecast sessions and guest users to scan these QR codes to instantly connect and start media sessions.

- Developed secure REST APIs for Chromecast device and session management.
- Implemented JWT authentication and QR-based guest session system.
- Designed MongoDB schemas for users, devices, and sessions.
- Built QR generation and verification logic using short-lived JWT tokens.
- Integrated with frontend guest panel for instant Chromecast connection.
- Deployed and optimized APIs on Render with proper CORS and error handling.

MMH – Medical Management & Hospital Platform September 2022 – June 2023

Overview:

Full-stack healthcare web application for patient care, hospital recommendations, appointment scheduling, and treatment tracking.

- Built backend APIs in Node.js and Express.js handling patient demographics, medical histories, and appointment lifecycle management.
- Designed MongoDB schemas optimised for healthcare data relationships, supporting fast retrieval of nested patient records.
- Integrated Multer for document upload workflows and Nodemailer for automated patient and admin email notifications.
- Secured sensitive medical data with RBAC enforcement across Admin and Operator roles throughout the application.
- Prevented clickjacking and common HTTP-based attacks by applying Helmet security headers across all API routes.
- Implemented structured async/await error handling across the full backend, reducing unhandled exceptions in production.
